

What Does Good Look Like?

OIMS is the living process by which we manage all work

- All work – at a project, job and task level – is evaluated for hazards, and planned so that risks are minimized by taking into account all the relevant OIMS systems and procedures

LPS is the continuous process of thoughtfully and deliberating engaging colleagues in a discussion on safe work behaviors

- Work is safely executed by **ASSESSING** the risk; **ANALYZING** how to reduce the risk; and **ACTING** to ensure safe operations by all people, at all sites, all the time

GRAF Core Safety Expectations support eliminating risk of significant injuries or fatalities (SIF)

- Losses and near losses are analyzed for risk of significant injury or fatality, and investigations are carried out to develop and share learnings

Best practices are developed, shared and embraced

- None of us is as smart as all of us!
- Together, we leverage our global organization, networks, consultants and contractors to safely and effectively fulfill our mission

All cases are actively and effectively managed

- Prompt, appropriate care is always our primary concern
- Supervisors & managers are immediately notified and thoroughly engaged

All underpinned by visible leadership and . . .

Collaboration

Communication

Commitment
